Project Location: Mendocino County, California

Project Description: CSP will restore ecosystem processes that are crucial to the viability of endangered species and their habitats in the Inglenook Fen-Ten Mile Dunes Natural Preserve (Preserve) through the implementation of project activities designed to remove unnatural elements and avoid impacts to sensitive resource sites.

The following summarizes the work:

- Remove three segments of abandoned asphalt roadway and underlying rock base totaling 2.7 miles (4.3 km). Some portions of the road will remain intact to protect sensitive resources.
- Remove two approximately 5-foot diameter (1.5 meter) culverts and associated fill materials to restore the stream bed, bank, and channel to a natural condition and reestablish native plant vegetation.
- Remove approximately 38 acres (15.4 ha) of previously treated European beachgrass using hand labor and approximately 15 acres (6.07 ha) of previously untreated European beachgrass through a long-term program of hand removal and native plant reestablishment.
- Remove other non-native plants, including trees and shrubs through a long-term program that includes reestablishing native dune forest in an approximate 7 acre (2.8 ha) area of back dunes.
- Reestablish federally and state-listed threatened and endangered species and other native plants into suitable habitat by direct seeding, transplanting, or installation of cuttings.
- Remove iceplant in select areas to increase habitat for the federally listed Howell's spineflower.
